

## H. Beth-Anne Bygum

Cybersecurity issues and the potential to disrupt resilient operations and brand trust are top priorities for publicly traded companies and corporate boards. Risks, particularly cyber risks, are accelerating and, if unprepared, can undermine regulatory compliance and strategic growth and weaken consumer loyalty. Navigating this environment, proactively responding to changes in regulatory expectations and managing fluctuating residual concerns requires knowledge and an understanding of proactive planning.

At Q2, Beth-Anne is responsible for the company's global information protection, product & application security (SSDLC), enterprise IT security, cyber defense, and data protection strategy and services. Our security program is designed to scale changes across the digital and development landscape while enabling the organization to achieve growth and revenue targets. Beth-Anne is a member of Q2's senior leadership team reporting to the president.

With more than 30 years of experience directing disparate teams across application and product security, cyber security, risk management, information governance, IT compliance, IT training and sales, Beth-Anne has proven expertise in connecting teams, people, and leaders across the organization in solving operational challenges that require large-scale transformation.

Beth-Anne holds a Master of Science in Management and Leadership (MSLM) from the University of La Verne and a bachelor's degree in business administration from Rutgers University. She has worked with leading companies in data science, technology, consumer packaged goods, biotechnology, pharmaceutical and consulting sectors. Beth-Anne holds a Certified Business Continuity Professional (CBCP) designation and is a member of NTSC, National Technology Security Coalition, a non-profit, non-partisan organization that serves as the preeminent advocacy voice for CISOs working with public and private sector stakeholders. Her work there is to help advance policies that improve national cybersecurity standards and awareness. Beth-Anne is a board advisor to the non-profit Forge Institute, where she and her husband volunteer their time to assist resources in underserved communities and transition military members into the civilian workforce.
